

Installation Guide for IBM Rational Developer for i Ver9.6 (RDi9.6)

Note: Before installing IBM RDi9.6, you must install and connect to [Seneca Student VPN](#) in your computer.

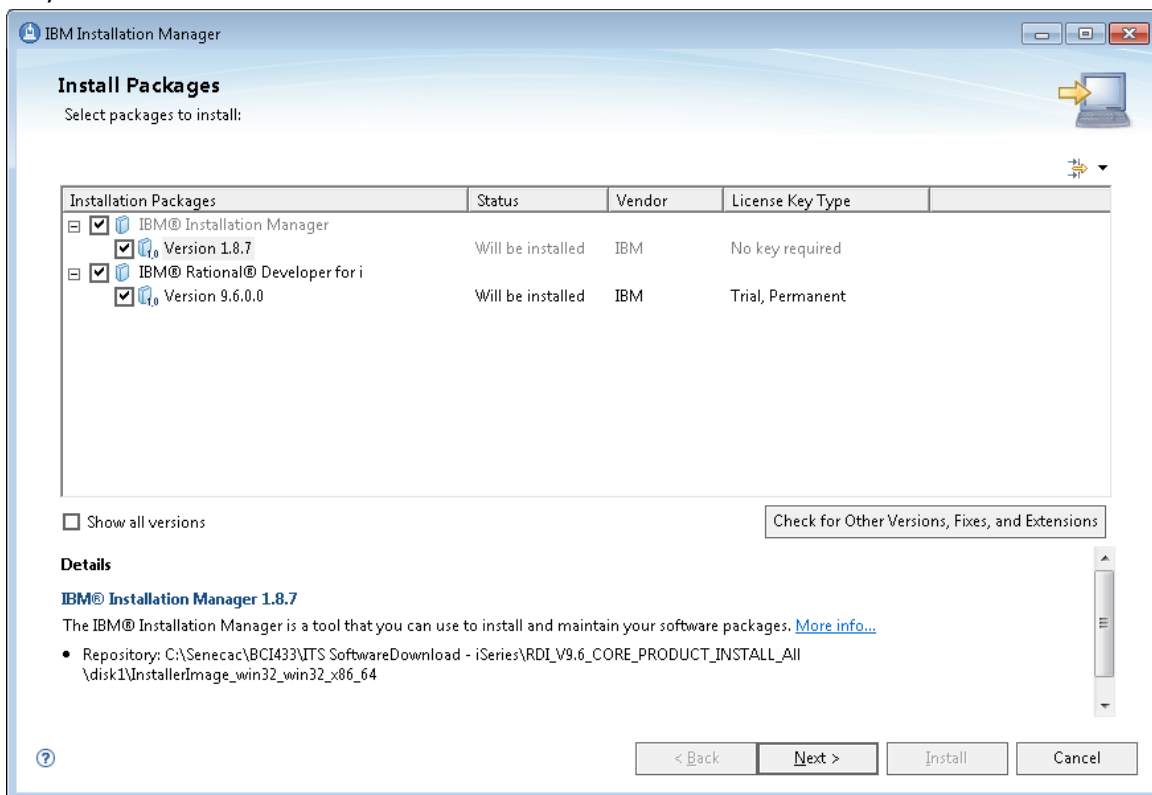

- Download "RDi V9.6 - Install 1", "RDi V9.6 - Install 2" and "RDi V9.6 - Activation" files from ITS [Software Downloads](#) – under iSeries.
- Unzip "RDi V9.6 - Install 1", and "RDi V9.6 - Install 2" zip files then move the "disk1" and "disk2" folders into a single folder.
- Go to "disk1" folder drive and click on **Launchpad.exe**. Note:
 - For **Linux**, go to disk1/InstallerImage_linux_gtk_x86_64 folder, run **sudo ./Install**
 - For **Mac OS**: From Finder, run **Launchpad.app** from disk1 or go to disk1/InstallerImage_macosx_cocoa_x86_64, and run **sudo ./install**
 - To use the launchpad to install, you must have Administrator or root privileges.

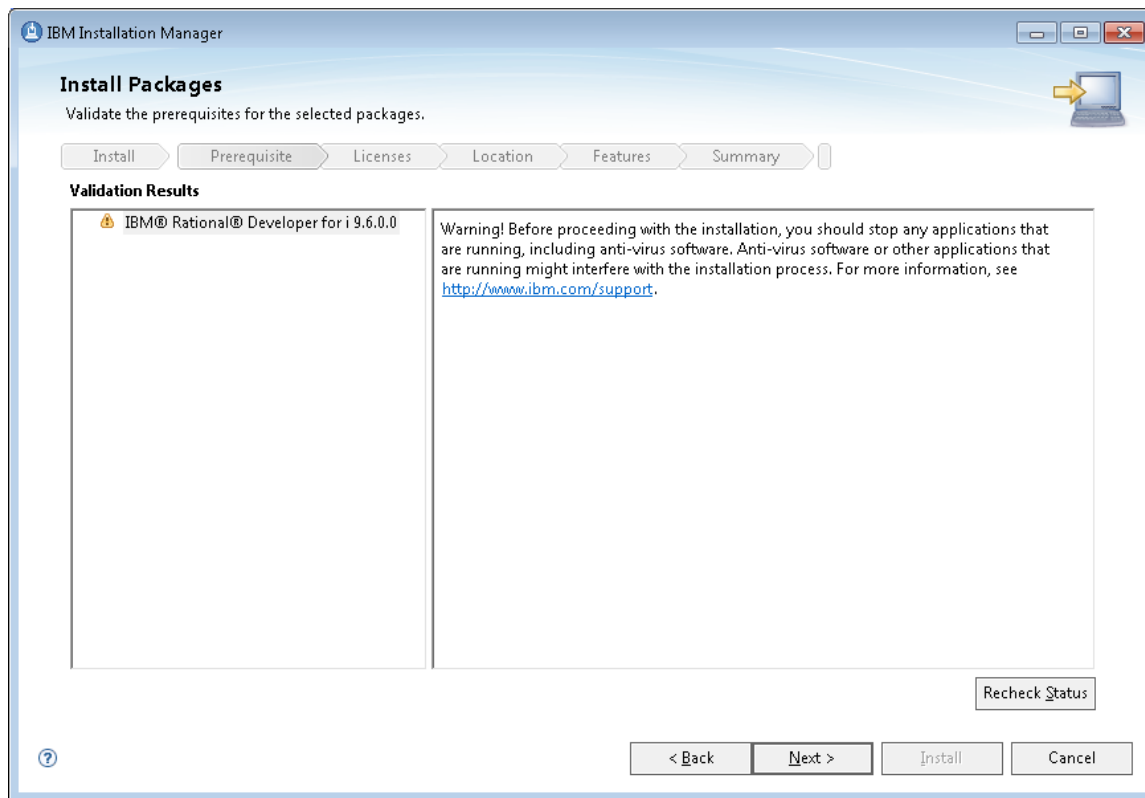

- Click on **Install IBM Rational Developer for i**

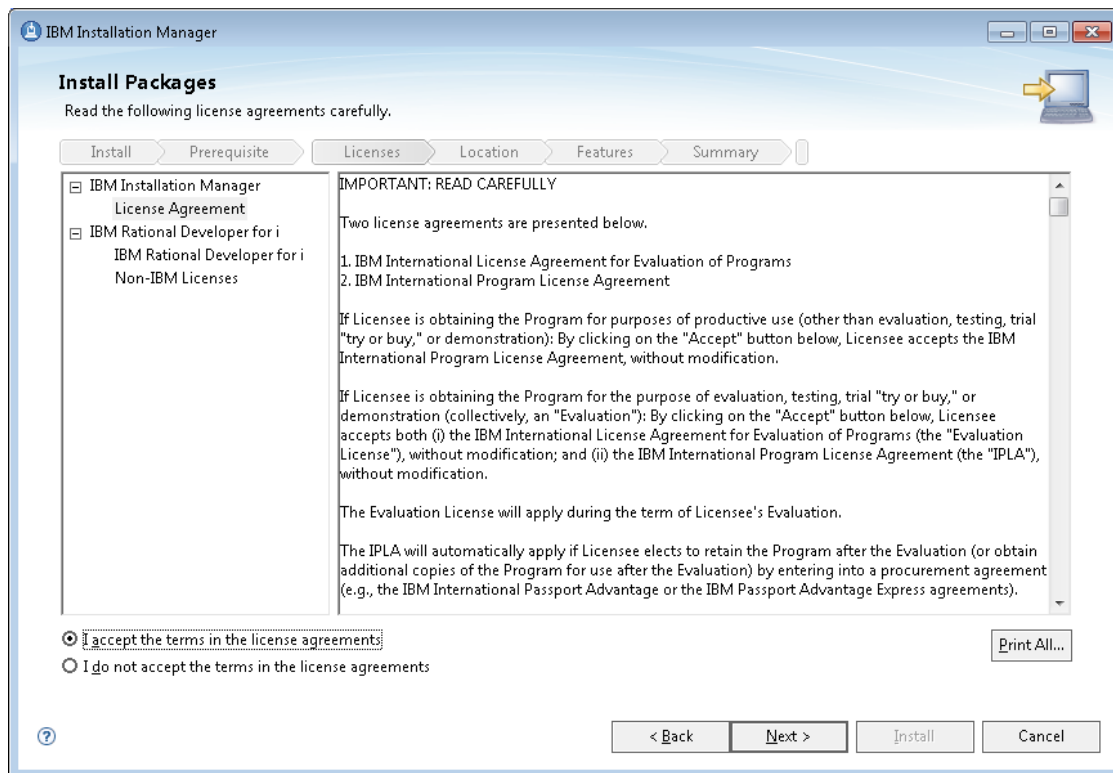

- Stayed at the above screen for a while

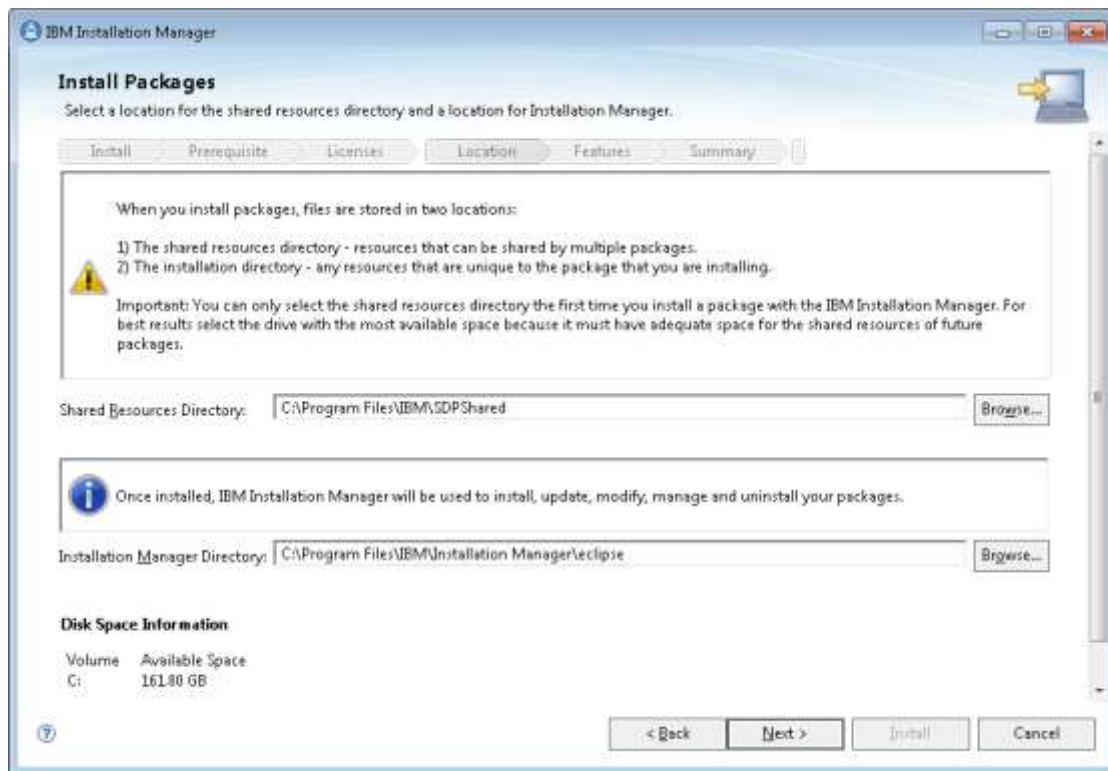

- Click on **Next**

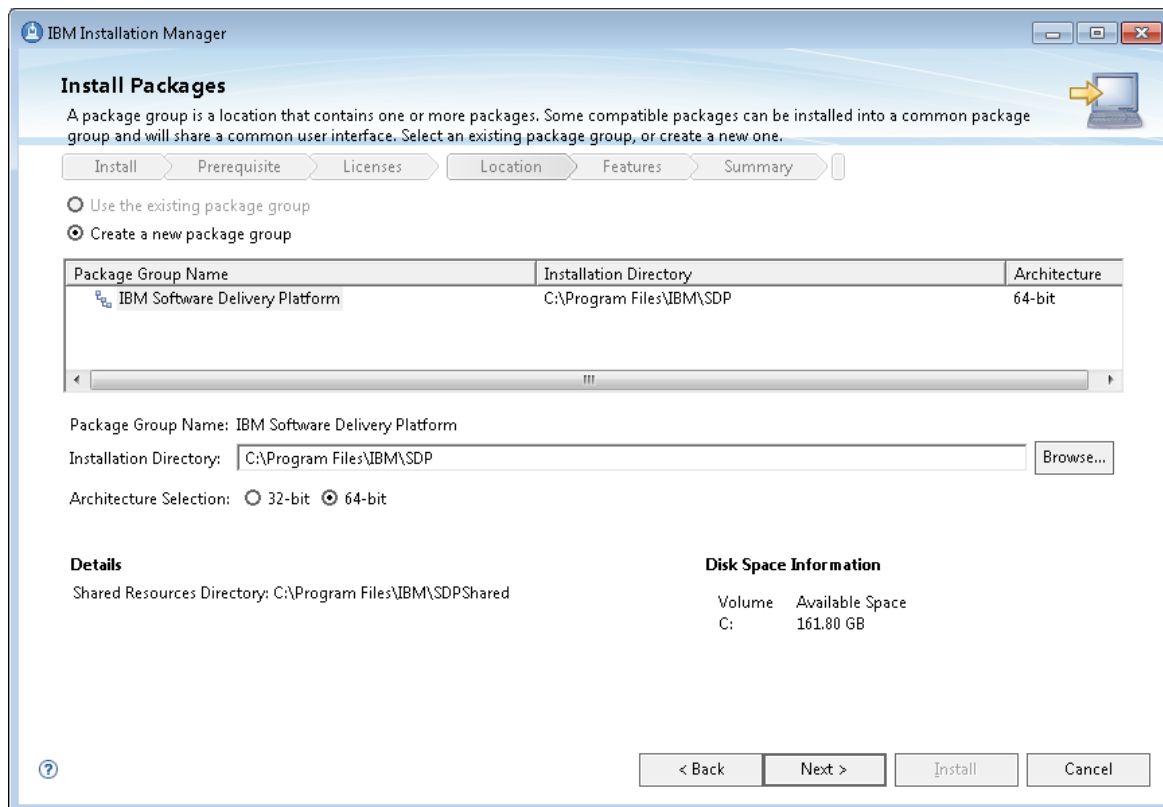

- Click on **Next**

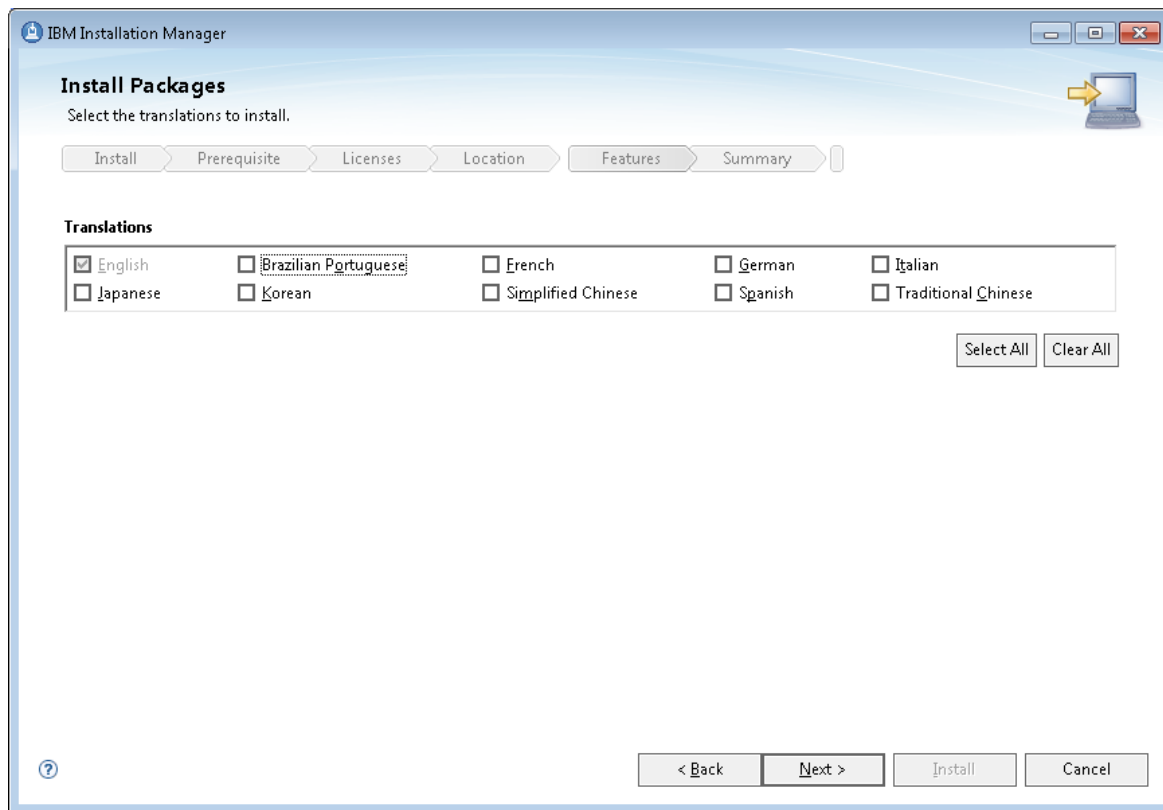

- Check **I accept ...** and click on **Next**

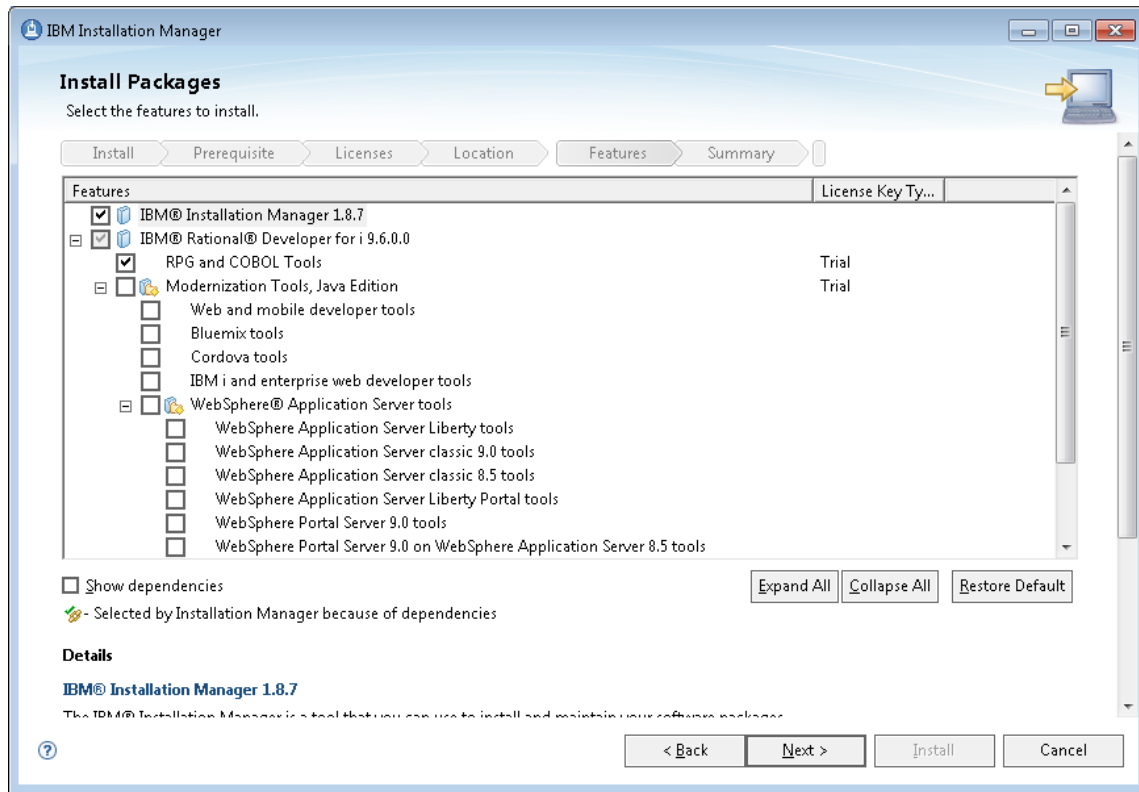

- Click on **Next**

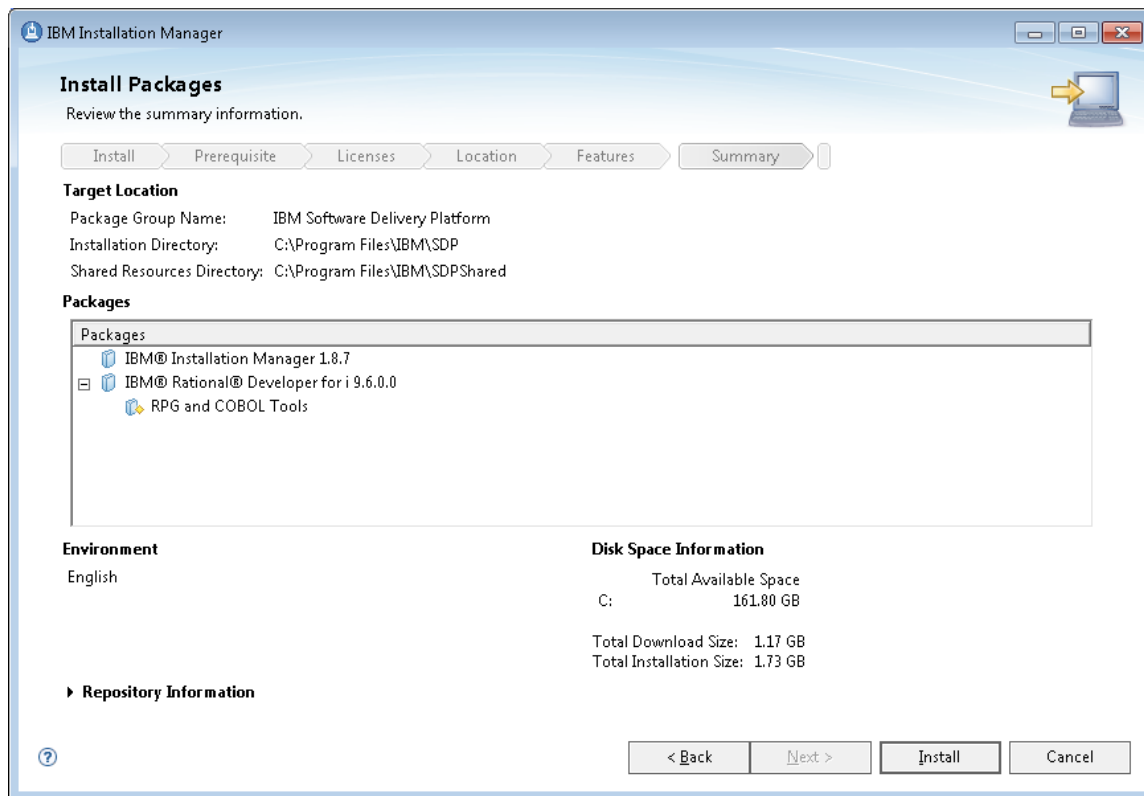

- Click on **Next**

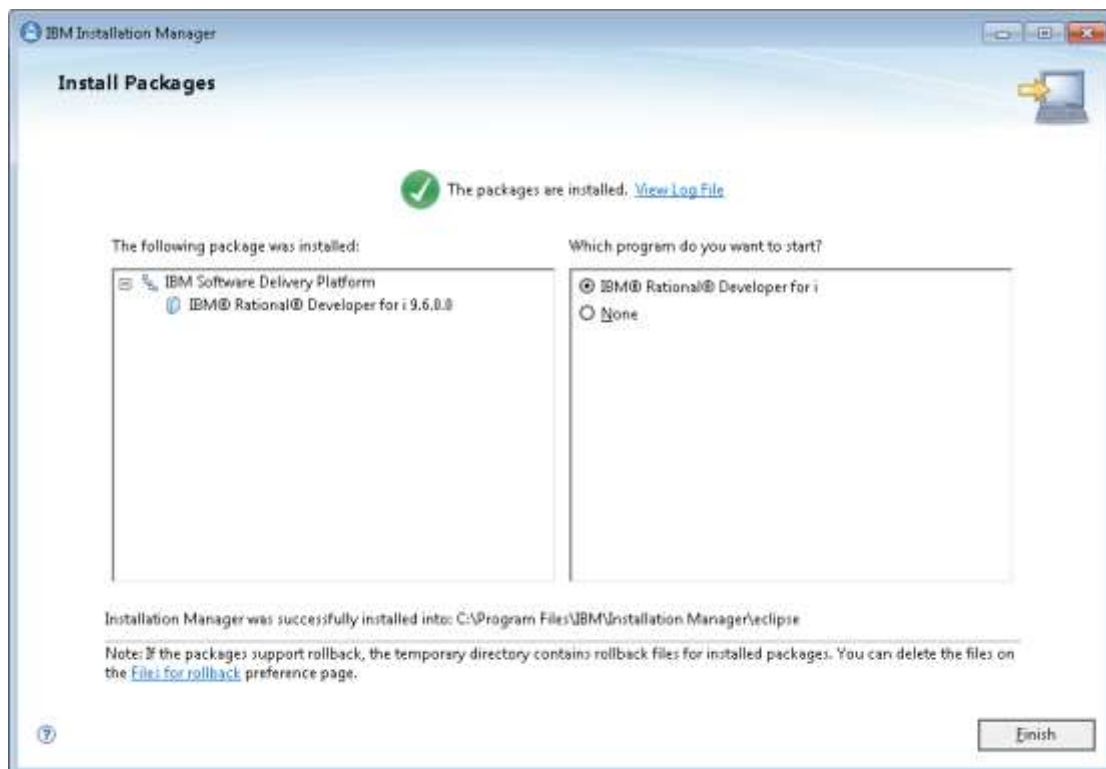

- Click on **Next**

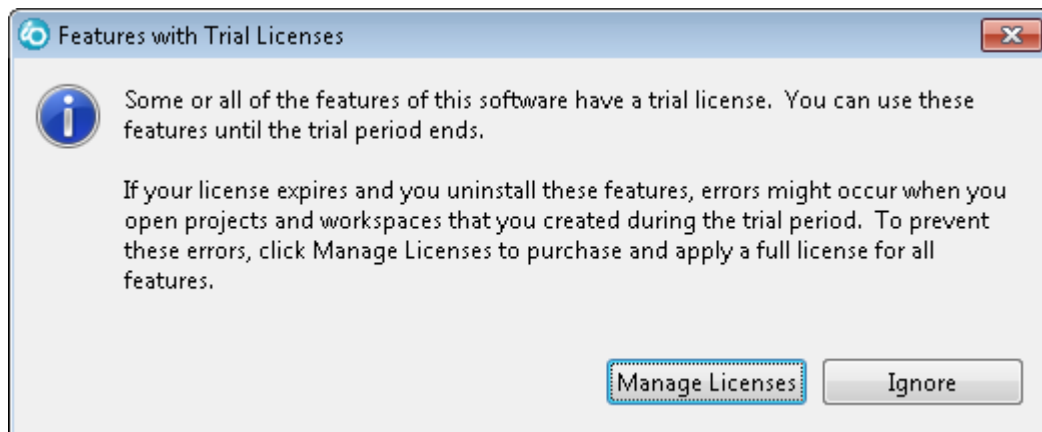

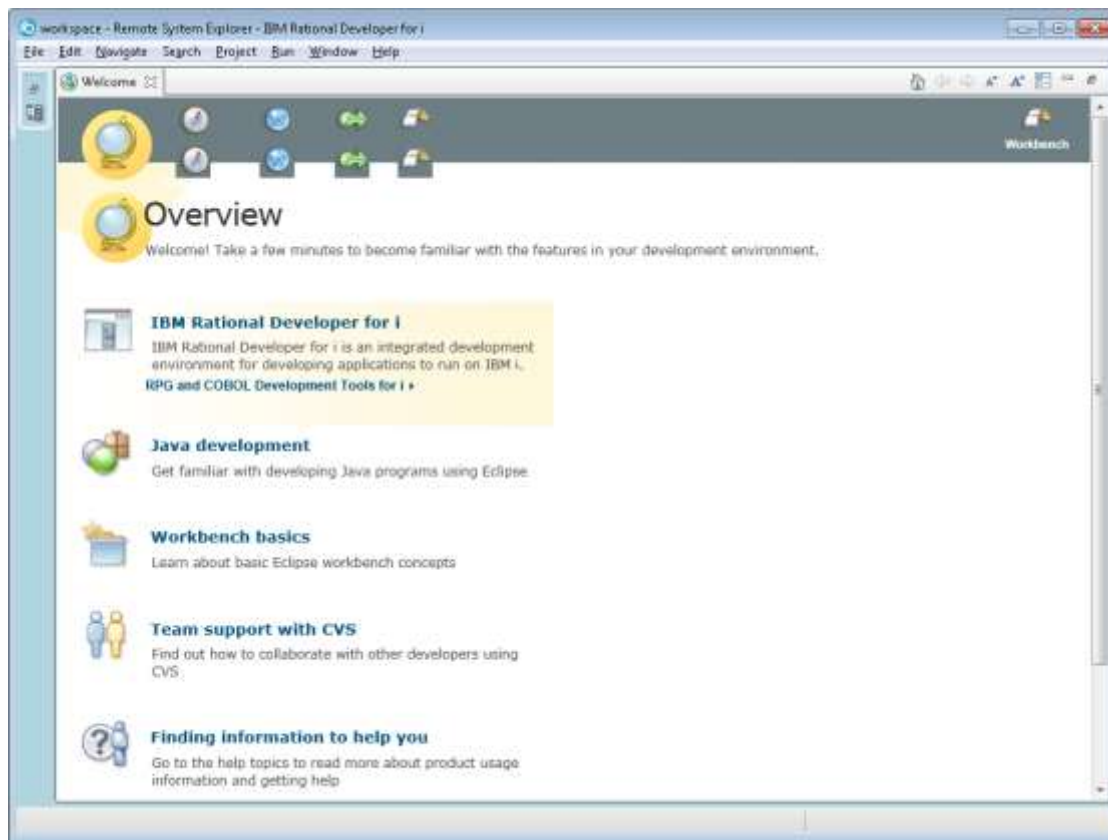

- Click on **Next**

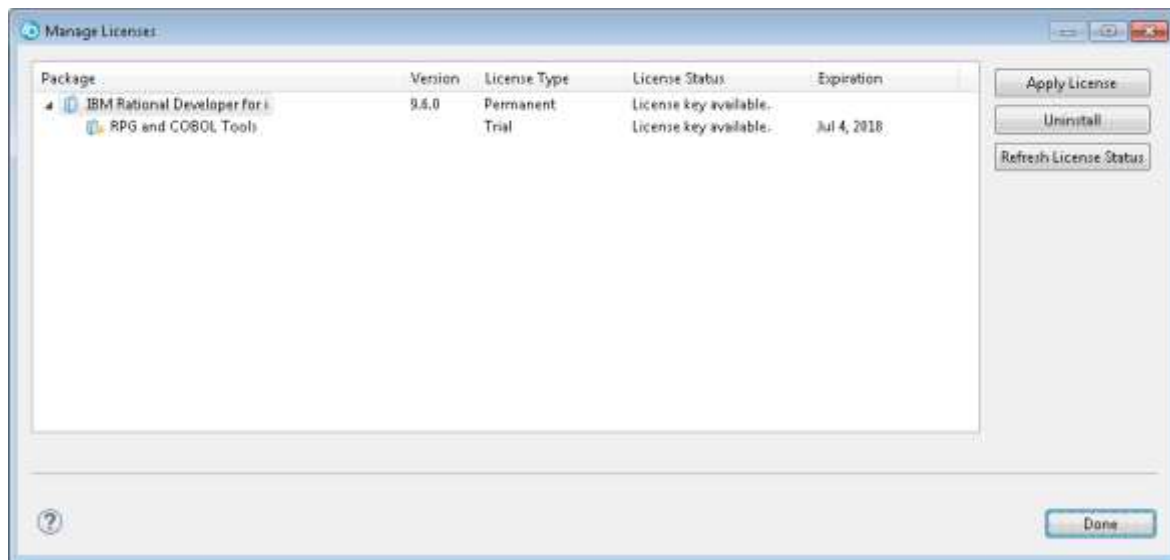

- Click on **Install**

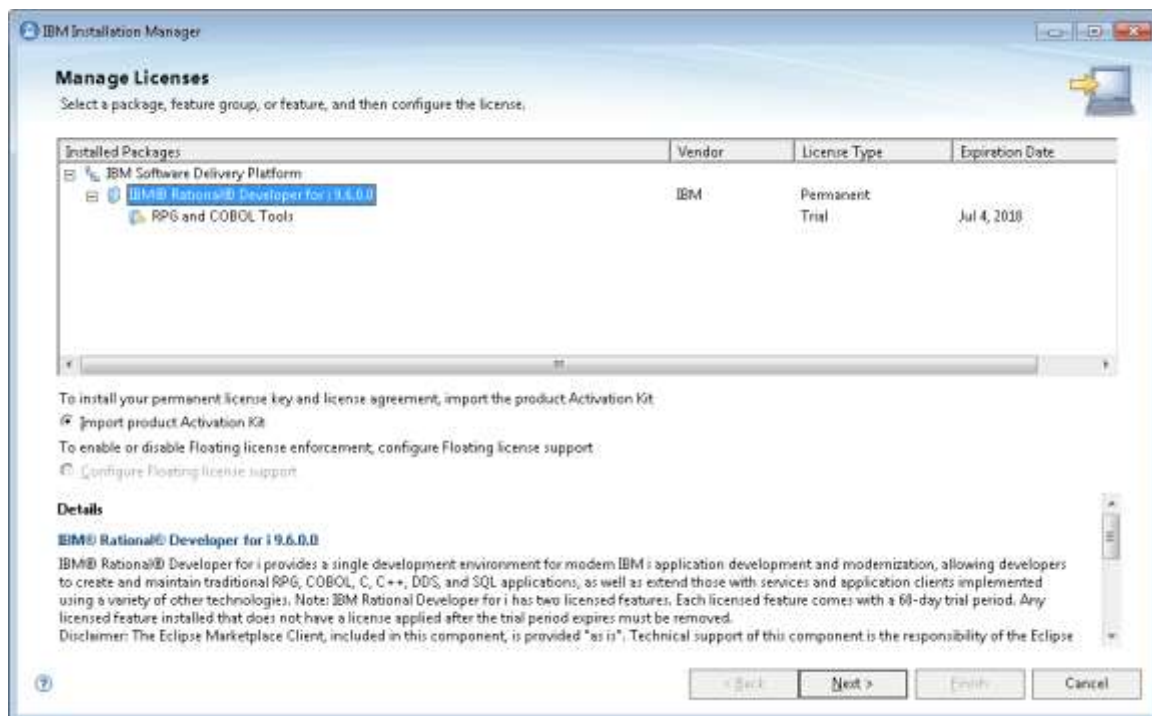

- Click on next, then RDi will start:

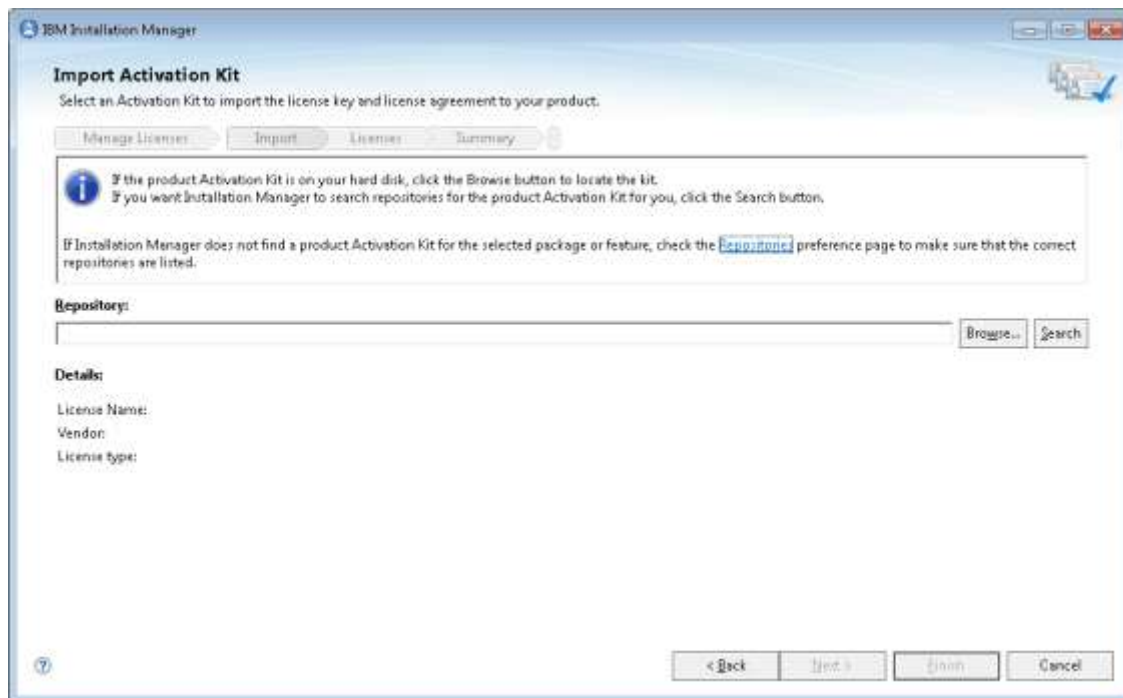

- Click on **Manage Licenses**
- (Or from Window Start button > All programs, launch the **IBM Installation Manager**)

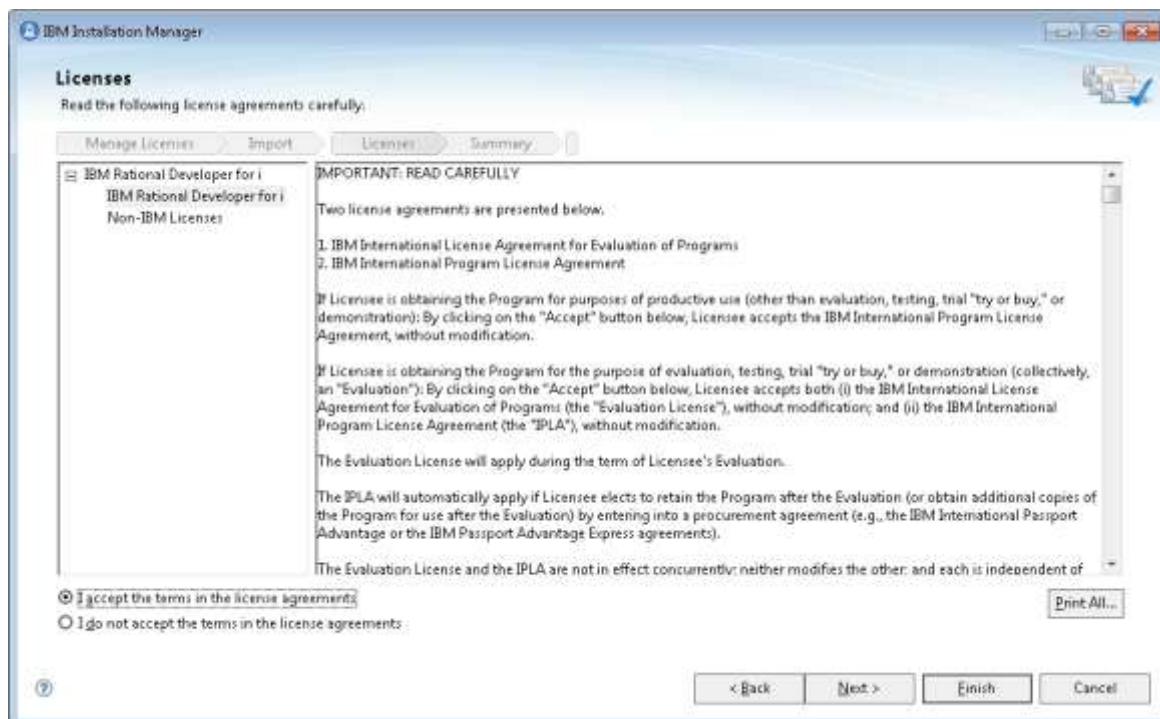

- Click on **Apply License**

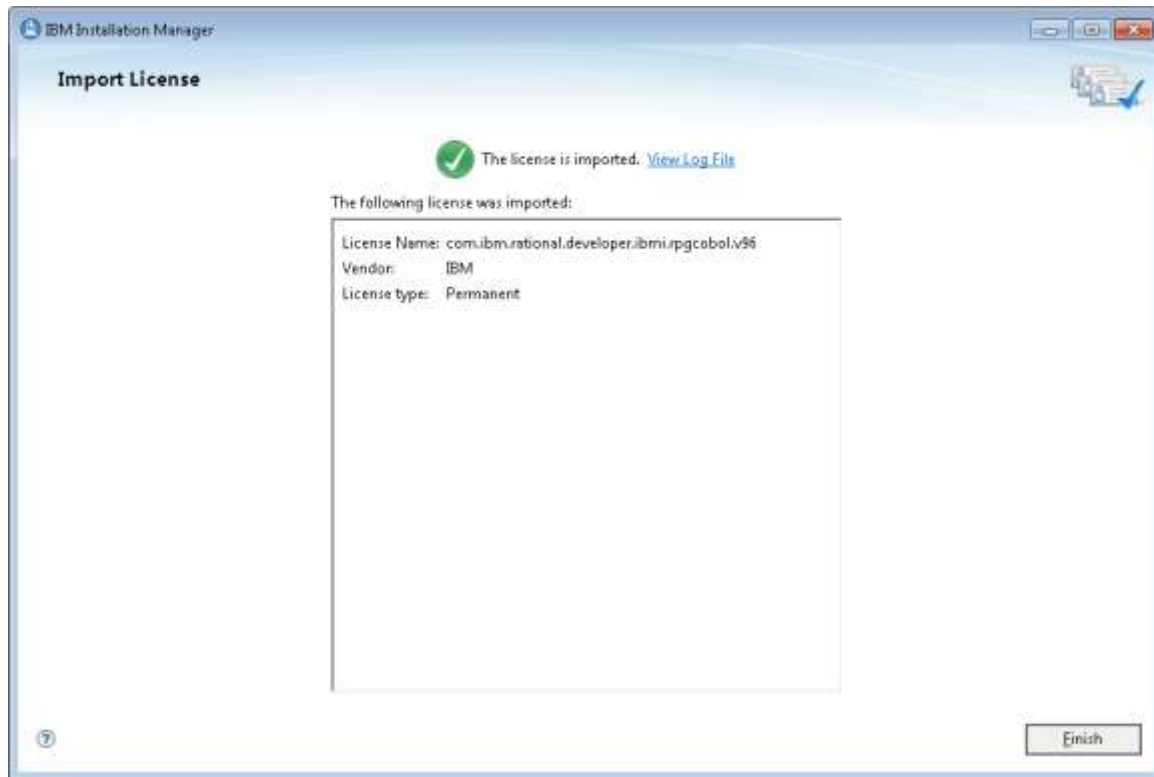

- Highlight **IBM® Rational® Developer for i 9.6.0.0** and check the radio button of **Import Product Activation Kit**, then click on next

- Unzip the downloaded "RDi V9.6 - Activation" zip file, then click the **Browse...** button to select "**com.ibm.rational.developer.ibm.rpgcobol.v96.pek.jar**" under the unzipped folder.
- Click on **Next**

- Click on **Finish**

- Click on finish:
 - You should see the start menu of **IBM Installation Manager** – DONE!

Connect to Seneca IBM i (ZEUS) server using your user ID (profile) and password:

- Start your RDi, and click OK to use the default Workspace.
- In the Remote Systems Explorer view, expand New Connection then double click "IBM i ...":

- Enter ZEUS.SENECACOLLEGG.CA for the Host Name, then click Finish:

The screenshot shows a 'New Connection' dialog box with the title 'Remote IBM i System Connection'. The subtitle is 'Define connection information'. The dialog contains the following fields and options:

- Parent profile:** A dropdown menu with 'VAIO' selected.
- Host name:** A text field containing 'ZEUS.SENECACOLLEGE.CA'.
- Connection name:** A text field containing 'My Connection to ZEUS - BCI433'.
- Description:** A text field containing 'My Connection to Seneca's Power System'.
- Verify host name:** An unchecked checkbox.
- Configure proxy settings:** A blue hyperlink.
- Buttons:** At the bottom, there is a help icon (?), a '< Back' button, a 'Next >' button, a 'Finish' button (highlighted with a blue border), and a 'Cancel' button.

- Expand the created connection, then Objects, Library list,
- Enter your user ID and password when the "Enter Password" window pops up. Done!
